Summary of Qualifications

My background includes an ever increasing level of responsibility in technical and business areas related to information technology. Over the last 20 years I have moved from general support to systems and network support and then onto network and systems architecture of systems large and small including ecommerce websites with thousands of orders each day and project management of million dollar projects for clients such as Chevron, CSAA and the Bar Association of San Francisco. In the last 10 years I have added extensive project management and facilities design to my skill set and I am currently working on my PMP certification. In the last 5 years I have expanded into business roles where in addition to technical expertise I have added business acumen and planning.

I am looking for an opportunity where I can continue to grow my skills and learn while offering value to a company. I am currently looking for positions as a lead technologist in either systems or network architecture or as a project manager implementing technology projects in a challenging environment.

Experience

Bar Association of San Francisco (April 2005- present) – Director of Information Technology

Personnel & Technical Management of BASF staff and projects with additional responsibilities including Technical Architect, Vendor Management, Systems Integration, Systems & Network Administrator, Budgeting and Strategic Planning. This position had two direct reports and in addition managed up to 6 contractors during large projects. The annual budget was in excess of \$500,000. One of the network improvement projects can be quantified as enabling grants in excess of \$25,000 each year by allowing remote offices to enter data into a central database. The membership application upgrade project has also enabled us to increase the efficiency of data entry by 25% and will save us in excess of \$100,000 over the next 10 years as we move to a more automated reservation model for CLE classes.

Theory and Practice Consulting (Jan 2002-Present) - Owner, San Francisco Bay Area

Project/Technical Architect & Manager, Senior Consultant and Technical Lead for wired and wireless network projects, ecommerce and data architecture projects for fortune 500 and small to medium businesses. Clients included California State Automobile Association, Sequoia Independent School District, EdVoice, and EdTec. Level II and III Network Support and Architecture. Level II Database Programming and Architecture.

Red Herring, Inc., San Francisco, CA (May 2000 – Sep 2001) – Intranet Manager/Project Manager

Led a team responsible for the design, implementation and ongoing support of an Intranet/Extranet (Plumtree) portal and other Enterprise Application Integration (EAI) projects for use by employees and customers of Red Herring. Level II Network Support and Architecture. Level II Database Programming and Architecture.

Petstore.com, Emeryville, CA (July 1999 – May 2000) – Project Manager/Technical Architect

Webmaster for Petstore.com and AnimalPlanet.com. Designed and implemented a scalable e-commerce website for Petstore.com allowing it to accept over a million hits a day and 4000 orders/day. Additional Responsibilities included implementation of a WMS (Warehouse Management System) with the potential to do 60,000 orders/day from front to back including vendor management, purchase management, installation management, and project management of all internal and external resources for the purposes of bringing the project in on time. Level II and III UNIX and Network Support and Architecture. Level I & II Database Support.

Sprint Paranet, Inc., San Francisco CA (October 1993 – July 1999) - Senior Internet Architect

Project Manager of multiple enterprise networking projects including research, design, implementation, and operations. Notable clients included Chevron Texaco, Shell, BP Amoco, Allied Signal, ABN AMRO and Sprint. Level I, Level II and Level III UNIX and Network Support and Architecture. Significant projects included leading Chevron R&D for internet technologies for Chevron Research & Technology, Compiling the network plan for ABN AMRO when they went through an acquisition phase of other banks in the Chicago area, leading the server support team for Allied Signal Engines in Phoenix and technical management of Chevron's first ecommerce application using ATG Dynamo.
